Professional Experience

DevOps Engineer 2, Oracle – Trivandrum, KL

February 2025 – Present

- Designed a Python-based Vault authentication service using Oracle Cloud IAM (Instance Principals & API Keys), eliminating CLI dependency and improving secure secrets access for development teams.
- Managed multi-region Oracle Kubernetes Engine (OKE) clusters across dev, preprod, and production environments, performing planned Kubernetes upgrades during maintenance windows and deploying applications using Helm, Helmfile, and Argo CD through GitOps-based workflows.
- Rewrote and optimized project GitLab CI pipelines to improve efficiency, replacing third-party services with Oracle Cloud resources such as OCIR and Object Storage, and developed supporting shell scripts to automate these workflows.
- Designed and implemented a Jenkins-based automation pipeline that parses a centralized YAML inventory of 500+ microservices, dynamically triggers downstream pipelines, automatically updates JDK versions in repositories, creates merge requests, and notifies service owners to streamline large-scale dependency upgrades.

DevOps Engineer, Qburst – Trivandrum, KL

July 2023 – January 2025

- Set up a Dockerized web server for an AI-based candidate screening tool, deploying multiple services in containers; configured Nginx as a reverse proxy with host-based routing to direct traffic using hostnames and secured the setup by implementing SSL on the Nginx instance.
- Developed optimized Terraform boilerplate templates for six common AWS architectures (EKS with EC2, EKS with Fargate, ECS with EC2, ECS with Fargate, EC2 with Auto Scaling Group and Application Load Balancer, and S3 with CloudFront), streamlining deployment processes for faster and more consistent infrastructure provisioning.
- Used AWS CodePipeline and Terraform to design and implement an Infrastructure as Code (IAC) pipeline to leverage AWS ECS for dynamically provisioning and managing temporary application instances for demo purposes. This pipeline automated the entire lifecycle from provisioning to destruction, ensuring cost-effectiveness.
- Handled managing, scaling, and deploying containerised applications in a variety of contexts using Kubernetes cluster orchestration.
- Implemented the Prometheus and Grafana stack within an EKS cluster to provide comprehensive monitoring.
- Deployed containerised application in Amazon ECS with inter service connectivity, auto-scaling and monitoring.
- Successfully migrated a live application with prior scalability and security issues to a robust AWS architecture, implementing auto-scaling groups for dynamic scaling and mitigating security risks by following standard security practices, all while ensuring zero downtime.

Certifications

Certified Kubernetes Administrator, The Linux Foundation

Credly

AWS Certified Solutions Architect – Associate, Amazon Web Services

Credly

Professional Cloud DevOps Engineer, Google Cloud

Credly

Education

Kearala Technological University, B.Tech in Computer Science

Aug 2019 – Jun 2023

Projects

Lockenv

pypi.org/project/lockenv

- Developed and published a CI/CD friendly Python pip package for encrypting environment variables of an application to be safely stored in code repositories.

Skills

Languages: Python, Bash, SQL, JavaScript

Tools: Terraform, Helm, Nginx Kubernetes, Istio, AWS ECS, Docker, Gitlab CI, Github Actions, Jenkins, Git, Prometheus, Grafana, PostgreSQL, MySQL, Self managed Gitlab, Gitlab Runner

Cloud Platforms: AWS, Oracle Cloud, Azure, GCP
